📍 Saint Paul, MN

I seek balance between work and life. I am a big team player and firmly believe that a strong team results in excellent quality work. I believe that in technology learning from each other and growing go hand in hand. I am versed in the production of high quality solutions for clients; bringing broad understanding of Modern HTML, Javascript, CSS, and software development, plus a very strong ability to execute standard software architectural patterns.

WORK EXPERIENCES

Front End Software Developer

Valtira | 2015 - 2019

My roles at Valtira pertained to various lead roles on certain projects and mentoring contract workers from over-seas with other duties. Extensive experience with web application and website design and development.

- Angular web application development / SQL / Unit testing with Jasmine
- HTML / CSS / SCSS / LESS / GULP / ANGULAR / REACT
- GIT version control / REST / REST api development with Node JS
- Experience with AWS Services / AWS Lambda / Dynamo DB / API Gateway / Cloud watch

Front End Developer & Creative

Minneapolis Community & Technical College | 2015 - 2015

I developed the navigation functionality for the site as well as the single creatives page HTML markup with CSS and JQuery. This site was first developed from a static site with Foundation and was then moved into a WordPress site. We worked on developing the site with a custom Wordpress template written in PHP.

Front End Developer (Internship)

Word Up Web - Digital Marketing | 2014 - 2014

Collaborated with a team of other web and graphic designers. I developed the logo, color scheme and assisted with web layout and positioning among the team. Developed a custom Wordpress template with PHP for the upcoming Wordpress event.

Server

Bakers Square | 2009 - 2015

Took orders, prepared food, delivered food and drinks. We specialized in getting things done fast, but correct. We worked as a team to provide better and more efficient service, up-sold specific drinks and meals as well as made new regular customers and friends.

PROJECTS

Cloud Court

<https://www.cloudcourtinc.com> <https://cloudcourt.valtira-apps.com>

For Valtira - the project was built using Angular and hosted on AWS. AWS lambda functions were written to trigger on the upload of transcript recordings into AWS buckets. Jasmine unit testing was utilized throughout the development process under an AGILE / SCRUM workflow.
